RIDING IN MILD FALL WEATHER

The two characteristics every cyclist wants from their go to pieces are exceptional wicking action to keep moisture away from the body and a great form fit that maximizes skin contact, ultimately maximizing wicking action. Cannondale has many pieces in this category for fall. A few essential's are the Midweight Jersey, the Morphis Jacket/Vest, Knickers, 3 Season Gloves and the warmers.

RIDING IN COLD, DRY WINTER WEATHER

Cannondale's insulation layer or Mid Layer is engineered to trap body heat while still moving perspiration to the outer layer where it can be effectively dispersed without causing evaporative cooling. The Fall Cannondale pieces to consider here are The Slice Jersey, the Midweight Tights, The Pack Me Jacket over a Lightweight jersey, Slice Gloves and the Skull Cap.

RIDING IN COLD, WET WEATHER

When it comes to the Outer layer, most cyclists will want a shell – something that turns back wind and precipitation. A Barrier that keeps the wicking and Insulation layers functioning as intended. In some situations however when winter means cool but humid weather look to a wind proof front with venting to the rear – this ensures a rider's stays warm while simultaneously moving moisture away from the riders body. Be sure to consider the Slice Bib Tight, the Slice Jacket, the Morphis Jacket and the Hydrono in Cannondale's Fall line this season.

X L.E. CHAMOIS

The X L.E. is Cannondale's premier chamois, bar none. Dual-density foam layers give instant comfort and retain that cushion during long, hard rides. Strategically located perforated air channels and open-cell foam give excellent breathability. Top fabric is buttery-soft for instant comfort.

- 8mm-thick layer of open-cell foam at the nose of the chamois gives breathability and moderate support
- 6mm-thick layer of closed-cell foam supports the riders weight for long-term comfort without binding or discomfort
- Meryl Skinlife fabric top layer is buttery-soft for instant comfort
- Perforated air channels throughout the chamois chassis deliver unprecedented breathability
- Stitch-free construction eliminates seam chafing
- 4-way stretch and gender-specific designs ensure a premium fit

SYNERGY

Cannondale's Synergy chamois is a prime example of vibration-reducing comfort and extraordinary wicking. The foundation of the pad is a 2mm layer that's followed by a 4-, 8-, and finally a 10-mm layer immediately beneath a rider's "sit bones" to maximize comfort. The nose of the chamois features stitch-free construction (to minimize chafing) and an air perforation system to optimize ventilation. The top layer of the chamois is buttery-soft for comfort.

- Foam densities and layers selected for optimum support and ride-all-day comfort
- Stitch-free construction eliminates seam chafing
- Top layer is buttery-soft for instant comfort
- Perforations optimize breathability
- Antibacterial
- Gender-specific channels in chamois chassis boost ventilation and flexibility

EZ-FLEX

Cannondale's EZ-Flex chamois places a premium on a rider's immediate comfort. The one-piece chamois eliminates seams and binding, ensuring a rider's every pedal stroke isn't hampered by an ill-suited chamois. Outstanding breathability and 4-way stretch panels further define the EZ-Flex.

- One-piece construction eliminates seams
- Weld lines offer added ventilation channels for increased airflow and the flexibility needed for all-day comfort
- 4-way stretch side panels mold to body and eliminate binding or discomfort
- Brushed synthetic knit gives stability with stretchy comfort

L.E.

A winter jacket that protects riders from the elements

Artic Barrier 3.2 has a breathable, windblocking laminate with a soft fleece interior to keep you warm and dry

Contents: 100% polyester face & back / 100% polyurethane laminate, waterproof fabric

RE-SPUN™ SERIES

Any Cannondale clothing carrying the Re-Spun name (or logo) benefits from our commitment to recycled fabrics. All Re-spun fabrics are spun from discarded polyethylene terephthalate (PET) bottles or excess fabric scraps. In most cases, recycled content is at least 42 percent (but usually 75 or 100 percent), resulting in a comfortable, durable garment. Select Re-Spun products also use organic bamboo charcoal to help combat odors. All Re-Spun fabrics offer premium wicking, warmth, and stretch performance.

At Cannondale, we never stop innovating. We never stop testing and pushing our products beyond conventional limits. Our team feels the same way about racing. Authentic Liquigas-Cannondale team issue apparel reflects our team's spirit of Never Settling. They never settle on the last mile, the last climb, the last finish. They constantly push to be stronger, faster, and better than the last time. Now bring that spirit to your next ride.

GUIDES: FABRIC

ARCTIC

7.45 oz/yd² - 250 gsm / 86% Nylon 14% Spandex
This double knit fabric uses ultra fine denier yarns for superior softness and moisture management. The inner surface features a brushed texture for comfort and thermal regulation

ARCTIC BARRIER

6.6 oz/yd² - 220 gsm / 100% Polyester Face & Back 100% Polyurethane laminate
This 3 layer fabric features a knit face and back for full range of motion stretch and superior comfort. Dual action wicking from the inside and DWR treatment on the outside effectively move the sweat away from your body, keeping you warm and dry, while keeping windchill and rain out. Arctic Barrier offers the perfect resistance to the elements for rigorous activity.

ARCTIC BARRIER 3.2

11.00 oz/yd² - 390 gsm / 100% Polyester Face & Back 100% Polyurethane laminate
Designed to battle the elements, Arctic Barrier 3.2 is a complex tri-layer fabric with a soft fleece interior that provides for excellent thermal regulation and a textured outer layer to repel wind and rain. The polyurethane laminate allows for superior breathability while keeping you warm and dry on the inside. Arctic Barrier 3.2 is the perfect shell for incremental conditions.

ELIXIR

280 gsm / 82% Nylon 18% Spandex
This soft, matte finished knit blends nylon with spandex for superior comfort, freedom of motion and moisture transfer. With a softly peached surface, Elixir provides 4-way stretch with excellent recovery and thermal regulation, perfect for moderate to high intensity rides.

HYDRONO

68 gsm / 100% Polyester/ 100% Polyurethane
This intelligent fabric features a hydrophilic water repellency system that activates when in contact with water: the molecular structure of the membrane swells up to create a barrier that blocks out water while allowing excess heat and sweat vapors from inside to escape. Lightweight and packable, Hydrono also boasts 4-way stretchability.

METROSHHELL 3.0

138 gsm / 3 layer laminate woven face / knit back
Function blends with style in this technical tri-layer hardshell. With 10 000mm H₂O water resistance, Metroshell will protect you even in the worst downpours. The woven twill surface provides softness and texture, with an inner tricot mesh for comfort and breathability, bonded with a highly breathable polyurethane membrane.

MORPHISLITE 2.5

115 gsm / 100% Polyester face / 100% Polyurethane membrane
The next generation of protection in the Pack Light franchise, Morphislite 2.5 adds a print layer for greater comfort. This fabric boasts the added benefit of a waterproof finish while maintaining the windproof and lightweight performance features of Pack Light 2. Easily packable, Morphislite is the functional solution to sudden changes in environments.

NEW AGE

190 gsm / 80% Nylon 20% Spandex
New Age is made with an environmentally friendly finishing process which uses less water and energy for lower carbon emissions. It's designed with a soft touch and compressive stretch for muscle stability and comfort for optimal performance.

NITRO

275 gsm / 67% Nylon 18% Polyester 15% Spandex
This tri-fibre blend uses a denier gradient technology which allows for speedy drying capabilities. Larger filament yarns against the skin transfer the moisture rapidly to the smaller filament yarns on the outer surface, causing them to spread and evaporate quickly. With a grid structure on the inside and a smooth outer surface, the grids provide channels for air to flow while the outer surface moves sleekly through the air and provides excellent durability.

NOVA 2.1

210 gsm / 80% Nylon 20% Spandex
le confiere otra dimensión a la Nueva Era. Este tejido proporciona una cobertura superior y una excelente protección ultravioleta, combinando una elevada capacidad de estiramiento, necesaria para actividades de alta resistencia. Tratada con un sistema avanzado para la gestión de la humedad, Nova proporciona un secado rápido y una regulación térmica, manteniendo tu cuerpo refrescado y seco y permitiéndote centrarte en lo que más te gusta: superarte.

PACK LIGHT PLUS

85 gsm / 100% Polyester face
This featherweight woven shell fabric is the ideal stow away material for uncertain conditions. Offering protection from the elements with a durable water resistant (DWR) coating, Pack Light Plus boasts superior breathability and a soft texture.

POLAR

8.46 oz/yd² - 285 gsm / 88% Polyester 12% Spandex
Offers full motion stretch with minimal bulk. This unique warp knit fabric features a smooth outer surface with a softly brushed inner layer that helps expedite moisture and increase air flow while keeping you warm and dry.

RAINSHELL

This 100% PVC shell is the ideal solution for sudden downpours. RainShell offers complete transparency for good visibility combined with pure waterproof functionality.

RESPUN

The ReSpun collection is Cannondale's commitment to environmentally friendly practices. This family of fabrics is made using polyster fibers derived from recycled PET bottles and raw polyster fabric scraps. Designed for performance, and helping to reduce excess waste, ReSpun is the perfect ingredient for earth friendly cycling apparel.

- ReSpun 135: 100% Polyester lightweight knit with functional stretch, excellent moisture transfer and breathability.
- Carbon 150: 95% Polyester 5% Bi-Constituent Fibre a breathable, moisture wicking double knit fabric with functional stretch and a carbon component for anti-odor protection.
- ReSpun 170: 90% Polyester 10% Spandex a heavier jersey fabric designed for moisture management and performance stretch.
- Carbon 270: 88% Recycled Polyester 12% Spandex This 4-way stretch fabric provides excellent recovery with anti-odor protection.

URBANSHELL 3.0

210 gsm / 100% Polyester face/ back with 100% Polyurethane membrane
A new innovation in softshell technology, UrbanShell features a grid mesh inner layer with a moisture transfer rating of 15 000mm H₂O. The dual action membrane moves sweat vapours to the outer layer while blocking out wind, rain or snow. A subtle plaid surface texture adds an element of style to this street warrior.

X L.E.

130 gsm / 100% Polyester
Designed for pro performance, the lightweight construction of X L.E. allows for exceptional air flow and sets up an environment for heart rate acceleration. Multi-filament count yarns enhance moisture transfer with rapid spreading action. The functional double knit structure has a grid texture with a highly durable outer surface and a quad-channeling cooling system that moves moisture quickly from the body to keep you dry and comfortable. With functional stretch X L.E. provides for 360 degree free range of motion to take your ride from excellent to extraordinary.

GUIDES: CHAMOIS

X L.E.

WOMEN'S X L.E.

X L.E. CHAMOIS

The X L.E. is Cannondale's premier chamois, bar none. Dual-density foam layers give instant comfort and retain that cushion during long, hard rides. Strategically located perforated air channels and open-cell foam give excellent breathability, while the Meryl Skinlife top fabric gives buttery-soft plushness.

- 8mm-thick layer of open-cell foam at the nose of the chamois gives breathability and moderate support
- 6mm-thick layer of closed-cell foam supports the riders weight for long-term comfort without binding or discomfort

- Meryl Skinlife fabric top layer is buttery-soft for instant comfort
- Perforated air channels throughout the chamois chassis deliver unprecedented breathability
- Stitch-free construction eliminates seam chafing
- 4-way stretch and gender-specific designs ensure a premium fit

SYNERGY

WOMEN'S SYNERGY

SYNERGY

Cannondale's Synergy chamois is a prime example of vibration-reducing comfort and extraordinary wicking. The foundation of the pad is a 2mm layer that's followed by a 4-, 8-, and finally a 10-mm layer immediately beneath a rider's "sit bones" to maximize comfort. The nose of the chamois features stitch-free construction (to minimize chafing) and an air perforation system to optimize ventilation. The top layer of the chamois is Meryl Skinlife fabric for buttery-soft comfort.

- Foam densities and layers selected for optimum support and ride-all-day comfort

- Stitch-free construction eliminates seam chafing
- Meryl Skinlife fabric top layer is buttery-soft for instant comfort
- Perforations optimize breathability
- Antibacterial
- Gender-specific channels in chamois chassis boost ventilation and flexibility

GUIDES: FIT

FITTED

For cyclists that compete at the highest level, the fit of apparel is parallel to the fit of their bike. Our professional cycling team garments now feature Team Fit™ tailoring. The Team Fit™ cut is aggressively contoured to match your physique like a second skin and deliver the best possible aerodynamic performance. Selected garments also feature mesh side panels for maximum ventilation, as well as flat-lock stitching to prevent chafing.

SEMI FITTED

Our Competition Fit is contoured to the body for enhanced aerodynamic performance. Although not as aggressively streamlined as the Team Fit™, the Competition Fit still provides the trim silhouette of traditional cycling wear.

RELAXED FIT

Every rider is different and so is every ride. Relaxed Fit is designed to provide more freedom of movement without compromising technical performance. As our loosest profile, it's perfect for everyone—from serious racers looking for a more relaxed edition to their training wardrobe to recreational cyclists and single-track rippers.

EZ-FLEX

WOMEN'S EZ-FLEX

EZ - FLEX

Cannondale's EZ Flex chamois places a premium on a rider's immediate comfort. The one-piece chamois eliminates seams and binding, ensuring a rider's every pedal stroke isn't hampered by an ill-suited chamois. Outstanding breathability and 4-way stretch panels further define the EZ Flex.

- One-piece construction eliminates seams

- Weld lines offer added ventilation channels for increased airflow and the flexibility needed for all-day comfort
- 4-way stretch side panels mold to body and eliminate binding or discomfort

GUÍAS: TEJIDOS

ARCTIC

7.45 oz/yd² - 250 gsm / 86% Náilon, 14% Spandex

Este tejido doble hace uso de hilos denier ultra finos para garantizar una suavidad superior y gestionar la humedad. La superficie interna presenta una textura peinada para mayor comodidad y regulación térmica.

ARCTIC BARRIER

6.6 oz/yd² - 220 gsm / Cara anterior de Poliéster 100%

y cara posterior de laminado de poliuretano 100%.

Esta prenda tricapa presenta una cara anterior y una cara posterior con tejido para permitir un elevado rango de movimientos y una comodidad superior. La doble acción de drenaje desde el interior y el tratamiento repelente al agua (DWR) del exterior transportan de manera eficaz el sudor para extraerlo del cuerpo, manteniéndolo caliente y seco a la vez que repele la sensación térmica del viento y la lluvia. Arctic Barrier ofrece la resistencia perfecta contra los elementos para actividades en condiciones extremas.

ARCTIC BARRIER 3.2

11.00 oz/yd² - 390 gsm / Cara anterior de Poliéster 100%

y cara posterior de laminado de poliuretano 100%

Diseñada para combatir los elementos, Arctic Barrier 3.2 es una compleja prenda tricapa que cuenta con una suave lana interior que proporciona una excelente regulación térmica y con una capa exterior con textura que repele el viento y la lluvia. El laminado de poliuretano garantiza una transpirabilidad superior a la vez que te mantiene caliente y seco. Arctic Barrier 3.2 es la prenda perfecta para condiciones graduales.

ELIXIR

280 gsm / 82% Nylon, 18% Spandex

Este tejido suave de acabado mate mezcla nylon y spandex para una mayor comodidad, libertad de movimiento y transferencia de la humedad. Con una superficie suave de piel de melocotón, Elixir es un tejido totalmente elástico con una excelente recuperación y regulación térmica, ideal para salidas de moderada a alta intensidad.

HYDRONO

68 gsm / 100% Poliéster, 100% Poliuretano

Este tejido inteligente cuenta con un sistema hidrófilo que repele el agua y se activa cuando entra en contacto con esta: la estructura molecular de la membrana se hincha para crear una barrera que impide el paso de agua, al tiempo que permite la expulsión del exceso de calor y los vapores del sudor. Ligero y de poco volumen, Hydrono también cuenta con un tejido totalmente elástico.

METROSHHELL 3.0

138 gsm / Tejido laminado en 3 capas en la cara anterior/ Cara posterior con tejido de punto

La funcionalidad se fusiona con el estilo en el caso de esta hardshell técnica tricapa. Con una resistencia al agua de 10 000 mm, MetrosHELL te protegerá incluso bajo los peores aguaceros. La superficie con tejido de sarga confiere suavidad y textura y cuenta con una malla tricot interior para proporcionar comodidad y transpirabilidad, unida a una membrana de poliuretano de elevada transpirabilidad.

MORPHISLITE 2.5

115 gsm / Cara anterior de Poliéster 100%/ Membrana de Poliuretano 100%

La siguiente generación en cuanto a protección en dentro de la gama Pack Light, Morphislite 2.5 añade una capa impresa para una mayor comodidad. Este tejido aumenta el beneficio añadido de un acabado resistente al agua manteniendo la resistencia frente al viento y la ligereza de la versión Pack Light 2. Sencillo de empaquetar, Morphislite es la solución funcional frente a los cambios de entorno repentinos.

NEW AGE

190 gsm / 80% Nylon, 20% Spandex

New Age cuenta con un proceso de acabado que respeta el medioambiente: utiliza menos agua y energía para reducir las emisiones carbono. Está diseñado con un tejido suave y compresivo que aporta mayor estabilidad muscular y comodidad para un rendimiento óptimo.

NITRO

275 gsm / 67% Nylon, 18% Poliéster, 15% Spandex

Esta mezcla de fibra triple utiliza una tecnología que permite un secado más rápido. Los filamentos interiores más grandes transfieren la humedad rápidamente a los filamentos exteriores más pequeños, haciendo que se evapore rápidamente. Con una estructura de rejilla en el interior y una superficie exterior lisa, las redes proporcionan canales para la circulación del aire mientras que la superficie exterior se mueve elegantemente y proporciona una excelente durabilidad.

GUÍAS: AJUSTE

FITTED

Para los ciclistas que compiten al más alto nivel el ajuste del vestuario es tan importante como el de la bicicleta. Nuestra línea de ropa para ciclismo profesional se confecciona ahora con el corte Team Fit™. El corte Team Fit™ se ajusta agresivamente creando una segunda piel que además proporciona el máximo rendimiento aerodinámico. Determinadas prendas cuentan con paneles laterales de ventilación y costuras planas para evitar el roce.

SEMI FITTED

Nuestro diseño Competition Fit se adapta anatómicamente para mejorar el coeficiente aerodinámico. Aunque su estilo es menos agresivo que el de las prendas Team Fit™, el corte Competition Fit también ofrece el nivel de ajuste de las prendas ciclistas tradicionales.

RELAXED FIT

Cada ciclista es diferente, y cada hora sobre la bicicleta es única. El corte Relaxed Fit ha sido concebido para proporcionarte una mayor libertad de movimientos sin renunciar al máximo rendimiento. Siendo el más holgado de nuestros estilos, es la opción ideal para todo tipo de ciclistas, desde los corredores más entusiastas que quieren añadir alguna prenda más cómoda a su equipación de entrenamiento, hasta los ciclistas ocasionales y los amantes de los tortuosos senderos de montaña.

GUÍAS: BADANAS

X L.E.

WOMEN'S
X L.E.

CULOTTE DE GAMUZA X L.E.

El culotte de gamuza X L.E. es, sin duda, el mejor de Cannondale. Las capas de espuma de doble densidad ofrecen un confort inmediato y mantienen la amortiguación durante la práctica ciclista más difícil y prolongada. Los canales de aire perforados estratégicamente y la espuma de celda abierta ofrecen una excelente transpirabilidad, mientras que el tejido Meryl Skinlife de la parte superior aporta una amortiguación flexible y suave.

- La capa de 8 mm de grosor de espuma de celda abierta en la zona delantera ofrece transpirabilidad y un soporte discreto
- La capa de 6 mm de grosor de espuma de celda sostiene el peso de los ciclistas para ofrecer comodidad durante más tiempo sin apretar ni molestar.
- La capa superior de tejido Meryl Skinlife es flexible y suave para aportar confort inmediato.
- Los canales de aire perforados en el armazón del culotte ofrecen una transpirabilidad sin precedentes.
- La estructura sin costuras elimina irritaciones.
- Los 4 modos de elasticidad y los diseños específicos para hombre y mujer aseguran un ajuste perfecto.

SYNERGY

WOMEN'S
SYNERGY

SYNERGY

El culotte de gamuza Synergy de Cannondale es un ejemplo perfecto de comodidad con reducción de vibración y absorción extraordinarias. La base del acolchado es una capa de 2 mm seguida de una capa de 4, de 8 y, finalmente, de 10 mm inmediatamente debajo de la zona del coxis del ciclista para maximizar el confort. El extremo delantero del culotte tiene una estructura sin costuras (para reducir la fricción) y un sistema de flujo de aire por perforación para optimizar la ventilación. La capa superior del culotte es de tejido Meryl Skinlife para ofrecer un confort flexible y suave.

- Las densidades y las capas de la espuma se han seleccionado para aportar el sostén óptimo y comodidad toda la jornada.
- La estructura sin costuras elimina irritaciones.
- La capa superior de tejido Meryl Skinlife es flexible y suave para aportar confort inmediato.
- Perforaciones para optimizar la transpirabilidad
- Antibacteriano
- Los canales en el armazón del culotte, específicos para hombre y para mujer, favorece la ventilación y la flexibilidad.

EZ-FLEX

WOMEN'S
EZ-FLEX

EZ - FLEX

El culotte de gamuza EZ Flex de Cannondale es un extra en la comodidad inmediata del ciclista. El culotte de gamuza, de una sola pieza, elimina las costuras y la opresión y garantiza que el pedaleo del ciclista no se vea obstaculizado por una gamuza inadecuada. El culotte de gamuza EZ Flex se completa con una excelente transpirabilidad y paneles con 4 modos de elasticidad.

- La estructura en una pieza elimina las costuras

- Las líneas de unión ofrecen canales de ventilación adicionales para incrementar el flujo de aire y la flexibilidad necesaria para aportar comodidad todo el día.
- Los paneles laterales con 4 modos de elasticidad se ajustan al cuerpo y eliminan la opresión y las molestias.
- El tejido de punto sintético y liso ofrece estabilidad con comodidad flexible.

GUIDES: TISSU

ARCTIC

250 g/m² / 86 % nylon / 14 % élasthane

Ce double-tricot est fabriqué avec un fil polyester ultra fin pour plus de douceur et une évacuation optimale de l'humidité. La surface intérieure possède une texture grattée, pour un confort accru et une régulation thermique supérieure.

ARCTIC BARRIER

220 g/m² / Couche extérieure 100 % polyester ; Couche intermédiaire 100 % polyuréthane

Ce tissu triple couche est doté d'une face extérieure et d'une face intérieure en tricot pour une liberté de mouvement totale et un confort accru. Le double système d'évacuation de l'humidité au niveau de la face intérieure et le traitement DWR à l'extérieur débarrassent votre corps de la transpiration, en vous gardant au sec et au chaud, tout en vous protégeant des vents glacials et de la pluie. Le tissu Artic Barrier offre une résistance parfaite aux éléments pour les activités dans des conditions rigoureuses.

ARCTIC BARRIER 3.2

390 g/m² / Couche extérieure et couche intérieure 100 % polyester;

Couche intermédiaire 100 % polyuréthane

Conçu pour vaincre les éléments, le tissu Artic Barrier 3.2 est un tissu triple couche complexe doté d'un intérieur en laine polaire qui assure une excellente régulation thermique et d'une couche extérieure de texture spéciale pour bloquer le vent et la pluie. La couche intermédiaire en polyuréthane apporte une meilleure respiration tout en vous gardant au sec et au chaud. Le tissu Artic Barrier 3.2 est la coquille parfaite pour les conditions météo variables.

ELIXIR

280 g/m² / 82 % nylon / 18 % élasthane

Ce tricot doux, d'aspect mat, utilise un mélange de nylon et d'élasthane pour apporter à la fois un confort, une liberté de mouvement et des capacités d'évacuation de l'humidité exceptionnels. Avec sa surface "peau de pêche" et sa construction multi-extensible, le tissu Elixir est doté d'excellentes capacités de compression et de régulation thermique, ce qui en fait un matériau parfait pour les sorties modérées ou intensives.

HYDRONO

68 g/m² / 100 % polyester / 100% polyuréthane

Ce tissu "intelligent" bénéficie d'une technologie hydrofuge qui s'active au contact de l'eau : la structure moléculaire de la membrane se gonfle pour faire obstacle à l'eau tout en permettant l'évacuation de l'excès de chaleur et de la transpiration vers l'extérieur. Ultra-léger et facile à replier, le tissu Hydrono est également multi-extensible.

METROSHHELL 3.0

138 g/m² / Triple couche / Surface extérieure tissée / intérieur tricot

Cette coquille dure triple couche associe fonctionnalité et style. Grâce à son coefficient d'imperméabilité à l'eau de 10 000 mm, la coquille Metroshell vous protégera même dans des conditions de pluies torrentielles. La surface tissée en sergé offre une texture douce, tandis que le tricot intérieur apporte un confort et des capacités de respiration supérieures, collé avec une membrane polyuréthane également perméable à l'air.

MORPHISLITE 2.5

115 g/m² / Surface extérieure 100 % polyester / Membrane 100 % polyuréthane

Nouvelle génération de protections Pack Light, Morphislite 2.5 comporte une couche supplémentaire pour un confort accru. Ce tissu offre à la fois une protection contre la pluie et contre le vent, tout en conservant la légèreté et les performances du tissu Pack Light 2. Facile à plier, le Morphislite est la solution pratique pour affronter les changements soudains des conditions météo.

NEW AGE

190 g/m² / 80 % nylon / 20 % élasthane

La finition du tissu New Age bénéficie un procédé respectueux de l'environnement, qui utilise moins d'eau et moins d'énergie pour réduire les émissions de carbone. Il possède un toucher doux et ses capacités d'élasticité et de compression garantissent à la fois un excellent maintien musculaire et un confort supérieur pour des performances optimales.

Les fils plus épais en contact avec la peau transfèrent rapidement l'humidité vers les fils plus minces de la surface extérieure, par un phénomène de propagation accélérée qui permet une évaporation maximale. L'intérieur du tissu possède une structure de maille pour favoriser la circulation de l'air, tandis que la surface extérieure est lisse afin de fendre l'air avec un minimum de résistance et d'offrir une excellente durabilité.

NITRO

275 gsm / 67% Nylon 18% Polyester 15% Spandex

Des fils plus petits sont utilisés dans le tissu Nitro pour un plus grand confort sur la peau et pour activer l'évacuation de la transpiration, alors que des fils plus larges sur le devant du tissu prennent une surface plus grande pour continuer à faciliter l'évacuation de l'humidité vers l'extérieur. La composition du Spandex fournit un soutien et une compression musculaire supérieurs afin d'optimiser la performance.

GUIDES: AJUSTEMENT

FITTED

Pour les cyclistes qui courent au plus haut niveau, la coupe des vêtements est aussi importante que la géométrie du vélo. Nos vêtements cyclistes des équipes professionnelles bénéficient maintenant d'une coupe Team Fit™. Cette coupe est agressive pour épouser votre corps telle une seconde peau et offre la performance aérodynamique la meilleure possible. Les vêtements sélectionnés ont également des panneaux latéraux en maille pour une ventilation maximale ainsi que des coutures plates qui éliminent les frottements.

SEMI FITTED

Notre coupe Compétition est près du corps pour une meilleure performance aérodynamique. Bien qu'elle ne soit pas aussi agressive que la coupe Team, la coupe Compétition offre cependant la silhouette élégante des vêtements cyclistes traditionnels.

RELAXED FIT

Tous les coureurs sont différents et toutes les courses sont différentes. La ligne Relaxed Fit a été développée de manière à permettre davantage de liberté de mouvement sans compromettre les performances techniques. Les vêtements Relaxed Fit, les plus amples de notre collection, conviennent à tous, du coureur aguerri recherchant une tenue d'entraînement plus relax au vététiste endurci, sans oublier le cycliste du dimanche.

NOVA 2.1

210 gsm / 80% Nylon 20% Spandex

Nova 2.1 Ajoute une nouvelle dimension à la gamme de produits de Nouvelle Génération. Ceci gonfle le tissu tricoté fournissant un tissu supérieur et une excellente protection d'UPF, combinée avec une capacité d'étirement extrême et qui procure le système de rétablissement nécessaires pour les longues randonnées d'endurance. De plus, traité avec un fini avancé dirigeant l'humidité, la série Nova 2.1 offre des capacités de séchage rapides et facilite le règlement thermique vous gardant au frais et sec, vous permettant ainsi de garder le focus sur ce qui a le plus d'importance: aller de l'avant!

PACK LIGHT PLUS

85 g/m² / Surface extérieure 100% polyester

Ce tissu poids plume est le matériau idéal pour affronter des conditions météo incertaines. Avec son revêtement hydrofuge durable (DWR) garantissant une excellente protection contre les éléments, le Pack Light Plus est doté de capacités de respiration supérieures et offre un toucher doux.

POLAR

285 g/m² / 88 % polyester / 12 % élasthane

Une élasticité maximale pour une liberté de mouvement totale et un encombrement minimum. Ce tricot à mailles jetées est exceptionnel, grâce à sa surface extérieure lisse et sa surface intérieure grattée, qui favorise l'évacuation de l'humidité et améliore la circulation d'air tout en vous gardant au sec et au chaud.

RAINSHELL

Cette coquille 100 % PVC est la protection idéale contre les pluies torrentielles soudaines. Le tissu Rainshell est transparent pour une meilleure visibilité et il possède des capacités d'imperméabilité idéales.

RESPUN

Tout textile Cannondale portant le nom ou le logo Re-Spun bénéficie de notre engagement au recyclage de tissus. Tous les tissus Re-Spun sont faits à partir de bouteilles de polyéthylène téréphthalate (PET) mises au rebut ou de bouts de tissus excédentaires. Selon le vêtement, le contenu de fibres recyclées varie de 42 à 100 %. Une sélection de produits Re-Spun utilisent aussi du charbon de bambou organique pour combattre les odeurs. Tous les tissus Re-Spun offrent une super capacité à vous garder frais en été et chaud en hiver, avec une excellente performance en matière d'évacuation et d'élasticité.

- ReSpun 135 : 100 % polyester Tricot ultra-léger doté d'une élasticité fonctionnelle remarquable, ainsi que d'excellentes capacités d'évacuation de l'humidité et de respiration.

- Carbon 150 : 95 % polyester - 5 % fibre biconstituée Double-tricot bénéficiant d'excellentes capacités de respiration et d'évacuation de l'humidité, ainsi que d'une élasticité fonctionnelle et d'une protection anti-odeur à base de carbone.

- ReSpun 170 : 90 % polyester - 10 % élasthane Tissu plus lourd conçu pour une évacuation de l'humidité et des performances d'élasticité maximales.

- Carbon 270 : 88 % polyester recyclé - 12 % élasthane Ce tissu multi-extensible bénéficie d'excellentes capacités de compression et d'une protection anti-odeur.

URBANSHELL 3.0

210 g/m² / Couches extérieure et intérieure 100 % polyester avec membrane 100 % polyuréthane Une nouvelle innovation technologique dans les coquilles souples, le tissu UrbanShell possède une couche intérieure en maille dont l'indice d'évacuation de l'humidité est de 15 000 mm H₂O. La membrane évacue l'humidité de la transpiration vers la couche extérieure, tout en bloquant le vent, la pluie ou la neige. La surface en tissu écossais raffiné apporte du style à ce véritable bouclier urbain.

X L.E

130 g/m² / 100 % polyester

Conçu pour des performances de niveau professionnel, la construction ultra-légère du tissu XLE garantit une circulation d'air exceptionnelle et crée un environnement adapté aux accélérations du rythme cardiaque. L'utilisation de fils multi-filaments favorise l'évacuation de l'humidité grâce à un phénomène de dispersion rapide. La structure fonctionnelle en double-tricot possède une texture de maille et une surface extérieure très robuste, ainsi qu'un système de refroidissement à quatre canaux qui assure une évacuation rapide de la transpiration pour vous maintenir au sec en tout confort. De plus, le tissu XLE possède une élasticité fonctionnelle maximale pour vous offrir une liberté de mouvement sur 360°, et faire de vos sorties des expériences extraordinaires !

X L.E.

WOMEN'S
X L.E.

X L.E. CARBON

Le XL. E. constitue le haut de gamme des matelassages Cannondale. Ses couches de mousse double-densité apportent un confort immédiat et durable lors des sorties longues et éprouvantes. Les passages d'air perforés disposés de manière stratégique et la mousse à cellules ouvertes offrent d'excellentes capacités de respiration, tandis que la surface externe en tissu Meryl Skinlife apporte une douceur exceptionnelle.

SYNERGY

WOMEN'S
SYNERGY

SYNERGY

Le matelassage Synergy est un exemple parfait de l'expertise de Cannondale en termes d'amortissement des vibrations, de confort et d'évacuation de l'humidité. Le matelassage est formé de couches successives de 2 mm, 4 mm, 8 mm et d'une couche de 10 mm située sous les os du bassin, pour un confort maximum. La partie avant du matelassage est réalisée sans coutures (pour éviter les problèmes de friction) et un système de perforations garantit une ventilation optimale. La surface externe est réalisée en tissu Meryl Skinlife, garant d'une douceur et d'un confort exceptionnels.

EZ-FLEX

WOMEN'S
EZ-FLEX

EZ - FLEX

Le confort immédiat du cycliste est la priorité du matelassage EZ Flex de Cannondale. Le EZ Flex est réalisé en une pièce sans coutures ni friction, pour garantir au cycliste une efficacité maximale à chaque coup de pédale, sans aucune entrave due au matelassage. Le matelassage EZ Flex bénéficie en outre d'une respirabilité exceptionnelle et de panneaux multi-extensibles.

- La couche de mousse à cellules ouvertes de 8 mm d'épaisseur située à l'avant du matelassage permet une respiration optimale et apporte un soutien modéré.
- La couche de mousse à cellules fermées de 6 mm d'épaisseur soutient le poids du cycliste et garantit un confort durable sans gêne.
- La surface externe en tissu Meryl Skinlife est extrêmement douce et procure un confort instantané
- Les passages d'air perforés à travers le matelassage apportent une respirabilité inégalée
- La construction sans coutures élimine les problèmes de friction
- Matériau élastique et coupe différenciée homme/femme pour un ajustement parfait

- Couches et densités de mousse sélectionnées pour garantir un soutien optimal et pour rouler en confort toute la journée
- La construction sans coutures élimine les problèmes de friction
- La surface externe en tissu Meryl Skinlife est extrêmement douce et procure un confort instantané
- Les perforations apportent une respirabilité optimale
- Antibactérien
- Les passages d'air différenciés homme/femme à travers le matelassage améliorent les capacités de ventilation ainsi que la flexibilité

- Construction en une seule pièce sans coutures
- Les lignes de soudure apportent un surcroît de ventilation, ainsi que la flexibilité nécessaire pour rouler en confort toute la journée
- Les panneaux latéraux multi-extensibles sont moulés à la forme du corps, pour un confort optimal sans plis, ni gêne.
- Le tricot synthétique gratté apporte de la stabilité et de l'élasticité pour le confort

GUIDES: TESSUTI

ARCTIC

7.45 oz/yd² - 250 g/mq / 86% Nylon 14% Spandex

Questo tessuto a doppia lavorazione utilizza filati finissimi per ottenere una maggiore morbidezza ed una migliore capacità di allontanare la sudorazione dall'epidermide. La superficie interna è morbida e pettinata per un comfort e una regolazione termica ottimali.

ARCTIC BARRIER

6.6 oz/yd² - 220 g/mq / 100% Poliestere su entrambe le facce - 100% Poliuretano laminato
Questo tessuto formato da 3 strati è caratterizzato da uno strato molto elastico e confortevole che consente una completa libertà di movimento. Le sue caratteristiche di permeabilità fanno sì che il sudore non rimanga a contatto della pelle mentre il trattamento esterno di resistenza all'acqua DWR sbarrava il passo a vento freddo e a pioggia, mantenendovi caldi e asciutti. Arctic Barrier è un ottimo riparo in caso di condizioni avverse.

ARCTIC BARRIER 3.2

11.00 oz/yd² - 390 g/mq / 100% Poliestere su entrambe le facce - 100% Poliuretano laminato
Progettato per sconfiggere la forza degli elementi, Arctic Barrier 3.2 è un complesso tessuto a tre strati con la parte interna costituita da uno strato di caldo, morbido fleece e uno strato esterno strutturato per non far penetrare acqua e vento. Il laminato in poliuretano lo rende traspirante mantenendovi caldi e asciutti. Arctic Barrier 3.2 è la barriera ideale contro la furia degli elementi.

ELIXIR

280 g/mq / 82% Nylon 18% Spandex

Questo morbido tessuto in Nylon e Spandex è estremamente confortevole, allontana la sudorazione dalla pelle e consente la più completa libertà di movimento. Con una finitura manopescata, Elixir è estensibile nelle 4 direzioni, ha ottime capacità di recupero della forma e di regolazione termica ed è perfetto per le uscite che richiedono un impegno da moderato a molto intenso.

HYDRONO

68 g/mq / 100% Poliestere/ 100% Poliuretano

Questo tessuto intelligente utilizza un sistema di idrorepellenza che si attiva a contatto con l'acqua: la struttura molecolare della membrana si gonfia e crea una barriera che blocca l'accesso all'acqua ma non impedisce al calore in eccesso e alla traspirazione corporea di uscire. Leggero e ripiegabile, HydroShell è anche estensibile nelle 4 direzioni.

METROSHHELL 3.0

138 gsm / laminato a 3 strati/ tessuto

La funzione si unisce allo stile in questo capo tecnico a tre strati. Con una idrorepellenza di 10 000mm di colonna d'acqua, Metroshell vi proteggerà anche dal diluvio universale. Il lato tessuto in diagonale conferisce struttura e morbidezza, uno strato interno in rete assicura comfort e traspirabilità, la membrana in poliuretano è altamente traspirante.

MORPHISLITE 2.5

115 gsm / 100% Poliestere/ membrana Poliuretano 100%

La seconda generazione in fatto di protezione nella dinastia Pack Light, Morphislite 2.5 si avvale di un altro strato per un comfort ancora maggiore. Leggero e antivento come il Pack Light 2, è reso idrorepellente da una particolare finitura. Facilmente ripiegabile, Morphislite è la soluzione funzionale ai cambiamenti improvvisi di clima.

NEW AGE

190 g/mq / 80% Nylon 20% Spandex

New Age viene realizzato con un processo di finitura "amico dell'ambiente" che riduce le emissioni di anidride carbonica utilizzando una minore quantità di acqua ed energia. Molto morbido al tatto, garantisce il comfort ed il sostegno necessari alla stabilità dei muscoli.

NITRO

275 g/mq / 67% Nylon 18% Poliestere 15% Spandex

Questo tessuto composto da tre fibre appropia il problema della sudorazione con una tecnologia a gradiente che assicura una rapida asciugatura. La superficie a contatto con la pelle è costituita da una struttura reticolata realizzata con un filato più grosso, che consente il passaggio dell'aria attraverso un sistema di piccoli canali e trasferisce velocemente l'umidità dell'epidermide verso la superficie più esterna. Quest'ultima è invece realizzata con filati più sottili che permettono di disperdere l'umidità per accelerarne l'evaporazione ed ha una superficie liscia.

NOVA 2.1

210 g/mq / 80% Nylon 20% Spandex

Nova 2.1 aggiunge una dimensione nuova alla linea New Age. Questo tessuto lavorato costituisce un ottimo riparo, un potente schermo contro i raggi solari ed ha quelle eccellenti caratteristiche di elasticità e recupero della forma necessarie nelle corse più impegnative. Sottoposto ad un avanzato processo di finitura molto efficace nel gestire il problema dell'umidità corporea, Nova 2.1 asciuga rapidamente, ha valide proprietà di regolazione termica che contribuiscono a mantenervi freschi e asciutti e vi permette di concentrarvi su ciò che più vi sta a cuore: andare avanti.

PACK LIGHT PLUS

85 gsm / 100% Poliestere

Questo leggerissimo tessuto impermeabile è il compagno ideale in caso di tempo incerto. Pack Light Plus garantisce protezione dagli elementi atmosferici grazie al trattamento esterno idrorepellente di lunga durata (DWR), è altamente traspirante e molto morbido.

POLAR

8.46 oz/yd² - 285 g/mq / 88% Poliestere 12% Spandex

Offre la piena libertà di movimento con il minimo ingombro. Il particolare ordito di questo tessuto crea una superficie esterna liscia con uno strato interno morbido e pettinato che contribuisce ad allontanare l'umidità dalla pelle, è molto traspirante e vi mantiene caldi e asciutti.

RAINSHELL

Questo impermeabile realizzato interamente in PVC rappresenta la soluzione ideale per ripararsi dagli acquazzoni improvvisi. RainShell, insieme alla sua idrorepellenza, offre una trasparenza completa per una buona visibilità.

RESPUN

La collezione ReSpun testimonia l'impegno di Cannondale verso tutto ciò che è attento all'ambiente. Tutti questi tessuti vengono realizzati con fibre di poliestere provenienti dal riciclaggio di bottiglie di PET e di scarti di tessuti. Progettato per le prestazioni e per ridurre i rifiuti, ReSpun è l'ingrediente base dell'abbigliamento ciclistico amico del pianeta.

• ReSpun 135: 100% Poliestere Tessuto leggero con elasticità funzionale, eccellente trasferimento dell'umidità e traspirabilità.

• Carbon 150: 95% Poliestere 5% Fibra Bi-Costituente Un tessuto a doppio ordito, traspirante e in grado di allontanare la sudorazione dalla pelle, con un'elasticità funzionale ed un componente in carbone attivo che lo rende resistente agli odori.

• ReSpun 170: 90% Poliestere 10% Spandex
Un tessuto più pesante messo a punto per gestire al meglio il problema della traspirazione della pelle e molto elastico.

• Carbon 270: 88% Poliestere Riciclato 12% Spandex
Questo tessuto estensibile nelle 4 direzioni ha eccellenti capacità di recupero della forma e proprietà anti-odore.

URBANSHELL 3.0

210 gsm / Poliestere 100% / membrana in Poliuretano 100%

Un'innovazione nella tecnologia dei tessuti impermeabili, UrbanShell si avvale di uno strato reticolato interno con una permeabilità di 10 000g/m²/24 ore. Questa membrana bivalente trasporta i vapori della sudorazione verso lo strato più esterno e sbarrava il passo a vento, pioggia e neve. Un discreto motivo a quadri aggiunge un tocco di stile a questo guerriero urbano.

XLE

130 g/mq / 100% Poliestere

Questo tessuto a doppia lavorazione ha una superficie esterna molto resistente. La parte a contatto con la pelle ha invece una struttura a griglia costituita da un sistema di piccoli canali che allontanano rapidamente l'umidità dell'epidermide per mantenervi comodi e asciutti. Elastico e funzionale, XLE è progettato per prestazioni costanti.

X L.E.

WOMEN'S
X L.E.

X L.E. CARBON

Lo chamois X L.E. di Cannondale è il leader incontrastato della categoria. Gli strati di schiuma a doppia densità regalano un comodità immediata che non viene meno durante le corse più lunghe ed estenuanti. La traspirabilità è eccellente, grazie ai piccoli canaletti perforati collocati strategicamente e alla schiuma a cellula aperta, mentre il tessuto più esterno Meryl Skinlife lo rende

morbidissimo al tatto.

- Uno strato di schiuma a cellula aperta di 8mm di spessore, nella parte anteriore dello chamois, assicura sostegno adeguato e

SYNERGY

WOMEN'S
SYNERGY

SYNERGY

Lo chamois Synergy di Cannondale ha straordinarie capacità di allontanare la sudorazione dall'epidermide e, nello stesso tempo, di ridurre le vibrazioni indotte dalla strada. È costituito da uno strato di imbottitura di 2mm di spessore, a cui vengono sovrapposti uno strato di 4 e uno di 8mm e, infine, uno di 10mm che si colloca immediatamente sotto le ossa "di seduta": il risultato è un comfort ineguagliabile. La parte anteriore dello chamois è priva di cuciture (per ridurre al minimo le irritazioni da sfregamento) e si avvale di un sistema di perforazioni che ne ottimizza la ventilazione. Lo strato più esterno è in tessuto Meryl Skinlife, molto morbido e confortevole al tatto.

- Strati in schiuma di diversa densità per garantire un sostegno ottimale e benessere per tutto il giorno
- Costruzione senza cuciture che elimina la possibilità di irritazioni per la pelle
- Tessuto Meryl Skinlife per lo strato esterno che risulta molto morbido e confortevole
- Le perforazioni ne ottimizzano la traspirabilità
- Antibatterico
- I canali presenti nella struttura dello chamois sono specifici per uomo e donna e ne aumentano la ventilazione e la flessibilità

GUIDES: VESTIBILITA'

FITTED

Per i ciclisti impegnati ai più alti livelli, l'idoneità dell'abbigliamento e degli accessori deve essere al pari di quella della loro bici. I capi della nostra linea dedicata alle squadre professionistiche hanno adottato il taglio Team Fit™: un profilo aggressivo creato per avvolgere i muscoli come una seconda pelle e per garantire la migliore performance aerodinamica possibile. Alcuni capi selezionati si avvalgono anche di pannelli laterali in rete per la massima ventilazione e cuciture piatte che evitano possibili irritazioni della pelle.

SEMI FITTED

La nostra linea Competition Fit segue il profilo del corpo per una aerodinamicità ancora migliorata. Sebbene il taglio non sia così aggressivo come quello della linea Team Fit™, mantiene la sagomatura asciutta dell'abbigliamento ciclistico tradizionale.

RELAXED FIT

Ogni persona è diversa come diverso è lo stile di guida di ognuno. Relaxed Fit è stato creato per assicurare una maggiore libertà di movimento senza compromettere le prestazioni tecniche. Con il suo profilo rilassato, è perfetto per ognuno di voi—dai corridori più impegnati che amano allenarsi con capi più ampi e comodi ai ciclisti della domenica ai patiti dei sentieri.

EZ-FLEX

WOMEN'S
EZ-FLEX

EZ - FLEX

L'obiettivo dello chamois EZ Flex di Cannondale è quello di garantire una grande comodità al corridore. La costruzione in unico pezzo permette di eliminare le cuciture e i bordi e non ostacola l'atleta durante la pedalata. La traspirabilità e l'estensibilità nelle 4 direzioni sono eccellenti.

- La costruzione a pezzo unico elimina le cuciture
- Le linee di saldatura costituiscono degli ulteriori canali di ventilazione che assicurano il passaggio dell'aria e garantiscono quella flessibilità necessaria ad assicurare comodità e benessere per tutto il giorno
- I pannelli laterali sono estensibili nelle 4 direzioni per seguire i movimenti del corpo, non per ostacolarli
- Il particolare tessuto conferisce stabilità, comodità ed elasticità

LEITFADEN: STOFFE

ARCTIC

7,45 oz/yd² - 250 g/m² / 86% Nylon 14% Lycra

Bei diesem doppelt gestrickten Stoff sorgt ein ultrafeines Denier für optimale Weichheit und Feuchtigkeitsregulierung. Die gebürstete Innenseite sorgt für Tragekomfort und Wärmeregulierung.

ARCTIC BARRIER

6,6 oz/yd² - 220 g/m² / 100% Polyester Front u. Rücken 100% Polyurethan-Laminat

Dieses Dreischichtgewebe sorgt dank seiner gestrickten Front und gestrickten Rückens für uneingeschränkte Bewegungsfreiheit und höchsten Tragekomfort. Dank der zweifachen Feuchtigkeitsabsorptionswirkung innen und der DWR-Imprägnierung außen wird Schweiß effektiv vom Körper weg abgeleitet, sodass du warm und trocken bleibst, während Wind und Regen abgewiesen werden. Arctic Barrier bietet bei extremer körperlicher Anstrengung optimalen Schutz gegen die Elemente.

ARCTIC BARRIER 3.2

11,0 oz/yd² - 390 g/m² / 100% Polyester Front u. Rücken 100% Polyurethan-Laminat

Entwickelt, um gegen die Elemente zu bestehen, ist Arctic Barrier 3.2 ein komplexes Dreischichtgewebe mit einer weichen Fleece-Innenseite, die für optimale Wärmeregulierung sorgt, und einer strukturierten Außenseite, die Wind und Regen abweist. Das Polyurethan-Laminat ist besonders atmungsaktiv und sorgt dafür, dass du trocken und warm bleibst. Arctic Barrier 3.2 ist die perfekte Hülle für steigende Schwierigkeitsgrade.

ELIXIR

280 gm² / 2% Nylon / 18% Spandex

Dieses weiche, seidenmatte Strickmaterial mischt Nylon mit Spandex für überragenden Komfort, Bewegungsfreiheit und Feuchtigkeitstransport. Mit weicher Oberfläche sorgt Elixir für Dehnbarkeit in alle Richtungen mit exzellenter Elastizität und Wärmeregulierung, perfekt für moderate bis hochgradig intensive Touren.

HYDRONO

68 gm² / 100% Polyester / 100% Polyurethan

Dieses intelligente Gewebe verfügt über ein hydrophyles wasserabweisendes System, das bei Kontakt mit Wasser aktiviert wird: Die Molekularstruktur der Membran schwillt an und erzeugt eine Barriere, die Wasser abhält und überschüssiger Wärme sowie Schweiß von innen erlaubt zu entweichen. HydroShell ist leicht und stopfbar und ist in alle Richtungen elastisch.

METROSHHELL 3.0

138 g/m² / Dreischicht-Laminat gewebte Front / gestrickter Rücken

Funktion mischt sich mit Stil in diesem technischen Dreischicht-Hardshell. Mit 10 000mm H₂O Wasserwiderstand, schützt Sie Metroshell selbst in den schlimmsten Regengüssen. Die gewebte Twill-Oberfläche bietet Weichheit und Textur mit einem inneren Trikot-Netz für Komfort und Atemaktivität, verbunden mit einer hoch-atmungsaktiven Polyurethan-Membran.

MORPHISLITE 2.5

115 g/m² / 100% Polyester-Front / 100% Polyurethan-Membran

Als Vertreter der nächsten Generation von Protektion bei Pack Light verfügt Morphislite 2.5 über eine weitere Druckschicht für mehr Komfort. Dieses Gewebe genießt die Vorteile einer Wasserdichten Schicht und behält die Winddichte von Pack Light 2 bei. Morphislite ist Mühelos verstaubar und stellt die funktionelle Lösung für plötzliche Änderungen der Umgebungseinflüsse dar.

NEW AGE

190 gm² / 80% Nylon 20% Spandex

New Age wird mit einem umweltfreundlichen Beschichtungsverfahren hergestellt, das weniger Wasser und Energie verbraucht und geringere CO₂-Emissionen hinterlässt. Es wurde mit einer angenehmen Oberfläche und umfassender Elastizität für Muskelstabilität, Komfort und optimale Leistung entwickelt.

NITRO

275 gm² / 67% Nylon 18% Polyester 15% Spandex

Diese dreifaserige Mischung nutzt eine Denier-Gradient-Technik, die eine schnelle Trocknung ermöglicht. Größere Filamentgarne an der Haut transportieren die Feuchtigkeit schnell zu den kleineren Filamentgarne auf der Außenseite und sorgt dafür, dass sie sich schnell ausbreitet und verdunstet. Mit einer Gitterstruktur auf der Innenseite und einer glatten Außenseite bieten die Gitter Kanäle, damit die Luft fließen kann.

LEITFADEN: ANPASSUNG

PASSFORM

Für Fahrradsportler, die Rennen auf höchstem Niveau austragen, ist die Passform ihrer Kleidung ebenso wichtig wie die Passform ihres Rads. Zu unserem Kleidungsangebot für Profi-Radsport-Teams gehört nun auch Team Fit™. Der Team Fit™ Schnitt ist auffallend körperbetont, um wie eine zweite Haut anzuliegen und somit die bestmögliche aerodynamische Leistung zu bieten. Ausgewählte Kleidungsstücke weisen außerdem einen Mascheneinsatz an den Seiten auf, um optimale Luftzirkulation zu gewährleisten, sowie Flatlock-Nähte, um Hautreibung zu verringern.

SEMI-PASSFORM

Unser Competition Fit ist auf die Körperform zugeschnitten, um eine verbesserte aerodynamische Leistung zu bieten. Auch wenn er nicht so betont stromlinienförmig ist wie der Team Fit™, weist der Competition Fit die schmale Silhouette der traditionellen Radsportbekleidung auf.

LOCKERE PASSFORM

Jeder Radfahrer ist einzigartig, so wie jede Fahrt einzigartig ist. Die lockere Passform von Relaxed Fit sorgt für mehr Bewegungsfreiheit, ohne dass die technische Leistung beeinträchtigt wird. Als unser lockerstes Produkt ist es für alle perfekt geeignet – vom ernsthaften Radrennfahrer, der seine Training-Garderobe um eine lockerere Variante ergänzen will, bis hin zu Freizeitsportlern und Singletrail-Bikern.

NOVA 2.1

210 g/m² / 80% Nylon 20% Lycra

Nova 2.1 bereichert die New-Age-Franchise um eine neue Dimension. Dieses kettengewirkte Gewebe bietet optimale Rundumabdeckung und hervorragenden UPF-Schutz, zusammen mit einem leistungsstarken Stretch- & Recovery-System, das für Ausdauerfahrten unerlässlich ist. Imprägniert mit einem technologisch ausgeklügelten Feuchtigkeitsregulierungs-Finish kriert Nova 2.1 das richtige Umfeld für schnelles Trocknen und gute Wärmeregulierung, sodass du warm und trocken bleibst und dich darauf konzentrieren kannst, was wirklich zählt: vorwärts zu preschen.

PACK LIGHT PLUS

85 g/m² / 100% Polyester-Front

Dieses federleichte gewebte Shell-Gewebe ist das ideale Verstaumaterial für unsichere Bedingungen. Pack Light Plus bietet mit einer robusten, wasserfesten (DWR) Beschichtung Schutz vor den Elementen und ist äußerst atmungsaktiv mit weicher Textur.

POLAR

8,46 oz/yd² - 285 g/m² / 88% Polyester 12% Lycra

Bietet uneingeschränkte Bewegungsfreiheit bei kleinster Masse. Mit seiner glatten Außenseite und seiner weich gebürsteten Innenseite sorgt dieses einzigartige kettengewirkte Gewebe für bessere Feuchtigkeitsableitung und Luftzirkulation und hält dich zugleich trocken und warm.

RAINSHELL

Diese 100% PVC Shell ist die ideale Lösung für plötzliche Regengüsse. RainShell bietet komplette Transparenz für gute Sicht in Kombination mit reiner Wasserdichtheit.

RESPUN

Die ReSpun-Kollektion steht für Cannondales Engagement für umweltfreundliches Handeln. Diese Gewebefamilie besteht aus Polyesterfasern aus recycelten PET-Flaschen und groben Abfällen von Polyestergeräten. ReSpun wurde für Performance entwickelt und um einen Beitrag zur Abfallverringerung zu leisten. Es ist die perfekte Zutat für umweltfreundliche Radsportbekleidung.

- ReSpun 135: 100% Polyester Leichtes Strickmaterial mit funktionellem Stretch, exzellentem Feuchtigkeitstransport und hervorragenden Atmungseigenschaften.
- Carbon 150: 95% Polyester 5% Bikonstituentenfaser Ein atmungsaktives, Feuchtigkeit ableitendes Strickgewebe mit funktionellem Stretch und einer Kohlenstofffaserkomponente für geruchshemmende Eigenschaften.
- ReSpun 170: 90% Polyester 10% Spandex Ein schweres Jersey-Gewebe für Feuchtigkeitsmanagement und hohe Elastizität.
- Carbon 270: 88% Recyceltes Polyester 12% Spandex Dieses in alle Richtungen dehnbare Stretchgewebe bietet eine exzellente Elastizität und geruchshemmende Eigenschaften.

URBANSHELL 3.0

210 g/m² / 100% Polyester-Front / -Rücken mit 100% Polyurethan-Membran

Als weitere Innovation in der Softshell-Technologie verfügt UrbanShell über eine Gitternetz-Innenschicht mit einer Feuchtigkeitsübertragungsrate von 15 000mm H₂O. Die doppelt funktionale Membran transportiert Schweiß zur äußeren Schicht und wehrt zugleich Wind, Regen und Schnee ab. Eine feine Plaid-Oberflächenstruktur verleiht diesem Straßenkämpfer ein weiteres Stilelement.

XLE

130 gm² / 100% Polyester

Dieses funktionelle, doppelt gestrickte Gewebe verfügt über eine Gitterstruktur mit einer hochgradig robusten äußeren Oberfläche und einem Kühlungssystem mit vier Kanälen, das die Feuchtigkeit schnell vom Körper ableitet und Sie trocken und komfortabel hält. Mit funktionellem Stretch wurde XLE für konsistente Leistung entwickelt.

X L.E.

X L.E. CARBON

Die X L.E. ist mit Abstand Cannondales führende Chamois Radhose. Die doppelte Schaumschicht sorgt für sofortigen Komfort und wirkt wie ein Puffer bei langen, harten Touren. Strategisch platzierte perforierte Luftkanäle und eine offenzellige Schaumstruktur bieten eine fantastische Atmungsaktivität und der Meryl Skinlife Außenstoff ist weich wie Samt.

WOMEN'S
X L.E.

- Eine 8 mm-Schicht offenzelliger Schaumstoff im Schrittbereich der X L.E. Chamois sorgt für Atmungsaktivität und bietet einen Basishalt
- Eine 6 mm-Schicht geschlossenzelliger Schaumstoff hält das Gewicht des Fahrers und garantiert lang anhaltenden Komfort, ohne Druckstellen oder Unbehagen
- Der Meryl Skinlife Außenstoff ist weich wie Samt und bietet sofortigen Komfort
- Ein Luftkammersystem im Inneren der X L.E. Chamois sorgt für unübertroffene Atmungsaktivität
- Durch die nahtlose Verarbeitung wird Scheuern vermieden
- Dank der Dehnbarkeit in 4 Richtungen und geschlechtsspezifischen Designs findet jeder das Passende

SYNERGY

SYNERGY

Cannondales Synergy Chamois ist ein fantastisches Beispiel für ein Modell mit hohem Tragekomfort dank Schwingungsdämpfung und hervorragendem Schweißtransport. Der Sitzpad basiert auf einer 2 mm-Schicht, auf welche eine 4, 8 und schließlich eine 10 mm Schicht folgen, direkt unter den Sitzknochen des Fahrers, für noch mehr Tragekomfort. Der Schrittbereich ist nahtlos verarbeitet, um Scheuern zu verringern und weist ein Luftkammersystem auf für optimale Belüftung. Außen besteht die Synergy Chamois aus Meryl Skinlife Stoff für samtweichen Tragekomfort.

- Die Dichte der Schaumschicht ist speziell abgestimmt auf optimalen Halt und täglichen Fahrkomfort
- Durch die nahtlose Verarbeitung wird Scheuern vermieden
- Der Meryl Skinlife Außenstoff ist weich wie Samt und garantiert sofortigen Komfort
- Die Luftlöcher verbessern die Atmungsaktivität
- Antibakteriell
- Geschlechtsspezifische Luftkammern im Inneren verstärken die Belüftung und Dehnbarkeit

EZ-FLEX

EZ - FLEX

Cannondales EZ Flex Chamois stellt den Fahrkomfort in den Mittelpunkt. Schluss mit Wundschneuern und Druckstellen dank der Verarbeitung aus einem Stück, so dass der Fahrer beim Treten in die Pedale nicht durch eine schlechtsitzende Radhose behindert wird. Außergewöhnliche Atmungsaktivität und die in 4 Richtungen dehnbare Füllung sind weitere Pluspunkte der EZ Flex.

- Keine Nähte dank der Verarbeitung aus einem Stück
- Die Bindenähte weisen zusätzliche Belüftungskanäle auf für einen besseren Luftfluss und die notwendige Dehnbarkeit für einen 24-Stunden-Tragekomfort
- Die Seitenteile sind in 4 Richtungen dehnbar und passen sich dem Körper an, so dass Druckstellen oder Unbehagen der Vergangenheit angehören
- Die umgekehrten Synthetiknähte sorgen für Stabilität und bieten gleichzeitig Komfort durch Dehnbarkeit

WOMEN'S
EZ-FLEX

GIDSEN: CONSTRUCTIE

ARCTIC

250 gr/m² / 86% Nylon / 14% Spandex

Bij deze dubbelgebreide stof wordt gebruikgemaakt van ultrafijne garens voor een superzacht gevoel en uitstekend vochttransport. De binnenzijde van het weefsel is licht geruwd voor een hoger comfort en betere warmteregulatie.

ARCTIC BARRIER

220 gr/m² / 100% Polyester binnen- & buitenzijde 100% Polyurethaan laminaat

Dit drielaags materiaal heeft een gebreide binnen- en buitenzijde voor volledige bewegingsvrijheid en superieur comfort. Het dubbele vochttransport vanaf de binnenzijde en de DWR-behandeling van de buitenzijde voert effectief het transpiratievocht weg van de huid waardoor je warm en droog blijft terwijl wind en regen worden tegengehouden. Het polyurethaan laminaat biedt de perfecte bescherming tegen de elementen tijdens ruige buitensportactiviteiten.

ARCTIC BARRIER 3.2

390 gr/m² / 100% Polyester binnen- & buitenzijde 100% Polyurethaan laminaat

Ontworpen om de strijd aan te gaan met de elementen. Arctic Barrier 3.2 is een hoogwaardig drielaags materiaal met een zachte fleece binnenzijde die zorgt voor uitstekende warmteregulering terwijl de geruwde buitenzijde de wind en regen tegenhoudt. Het polyurethaan laminaat heeft superieure ademende eigenschappen terwijl de binnenzijde warm en droog blijft. Arctic Barrier 3.2 is de perfecte bescherming tegen verslechterende weersomstandigheden.

ELIXIR

280 gr/m² / 82% Nylon 18% Spandex

Deze zachte gebreide stof met een mat oppervlak wordt gecombineerd met spandex voor een superieur comfort, bewegingsvrijheid en uitstekende vochtregulering. Voorzien van een prachtig zacht oppervlak, biedt de Elixir bovendien een vierzijdige stretch met uitstekende compressie-eigenschappen en warmteregulering, perfect voor gemiddelde tot intensieve trainingsritten.

HYDRONO

68 gr/m² / 100% Polyester/ 100% Polyurethaan

Deze intelligente stof heeft een hydrofiel waterafstotend systeem dat geactiveerd wordt als het in contact komt met water: de moleculaire structuur van het membraan zwelt op waardoor er een barrière ontstaat die het indringende water tegenhoudt terwijl overtollige warmte en zweet wel van binnen naar buiten kan ontsnappen. De Hydroshell is Deze intelligente stof heeft een hydrofiel waterafstotend systeem dat geactiveerd wordt als het in contact komt met water: de moleculaire structuur van het membraan zwelt op waardoor er een barrière ontstaat die het indringende water tegenhoudt terwijl overtollige warmte en zweet wel van binnen naar buiten kan ontsnappen. De Hydroshell is lichtgewicht en compact en is bovendien vierzijdig elastisch.

MORPHISLITE 2.5

115 gr/m² / 100% polyester buitenzijde / 100% polyurethaan membraan

De nieuwe generatie van bescherming in de Pack Light-serie, Morphislite 2.5, biedt een extra druklaag voor meer comfort. Dit weefsel heeft als bijkomend voordeel dat het een waterdichte laag toevoegt terwijl de winddichte en lichtgewicht eigenschappen van het Pack Light 2-materiaal behouden blijven. Morphislite is eenvoudig en compact op te vouwen en biedt een functionele oplossing voor snelle weersveranderingen.

NEW AGE

190 gr/m² / 80% Nylon 20% Spandex

Bij New Age wordt gebruik gemaakt van een milieuvriendelijk afwerkingsproces waarbij er minder water en energie gebruikt wordt en dus minder CO₂ wordt uitgestoten. Het materiaal voelt zacht aan en het biedt een stretch-compressie voor spierstabiliteit en comfort voor optimale prestaties.

NITRO

275 gr/m² / 67% Nylon 18% Polyester 15% Spandex

Deze vierzijdige vezelmix gebruikt een speciale garentechnologie die ervoor zorgt dat de kleding snel droogt. Lange vezels tegen de huid zorgen voor een snelle vochtafvoer naar de kortere vezels aan de buitenzijde waar het vocht zich verspreidt en snel verdampt. Door de netstructuur aan de binnenzijde en een gladde buitenzijde, zorgen de kanalen in het netwerk ervoor dat er lucht in het weefsel kan circuleren.

NOVA 2.1

210 gr/m² / 80% Nylon 20% Spandex

Nova 2.1 is een nieuwe toevoeging aan het New Age-label. Dit fijngebreide weefsel sluit superieur rond het lichaam en biedt excellente UV-bescherming, gecombineerd met een sterke stretch en compressie die nodig is voor lange duurtrainingen. Nova 2.1 is voorzien van een geavanceerde vochttransportlaag waardoor het weefsel snel droogt en een goede warmteregulering heeft, waardoor jij koel en droog blijft en je kunt concentreren op het belangrijkste: blijven pushen op de pedalen.

PACK LIGHT PLUS

85 gr/m² / 100% Polyester buitenzijde

Deze superlicht geweven stof is ideaal voor snel veranderende weersomstandigheden en kan zeer compact worden opgevouwen. Pack Light Plus biedt bescherming tegen de elementen door een duurzame waterbestendige (DWR) coating gecombineerd met superieure ademende eigenschappen en een zacht aanvoelend weefsel.

POLAR

285 gr/m² / 88% Polyester / 12% Spandex

Biedt volledige bewegingsvrijheid bij minimaal volume. Deze unieke gebreide stof heeft een soepele buitenzijde en een zachtgeruwde binnenlaag die helpt om het vocht af te voeren en de luchtstroom te verhogen waardoor jij warm en droog blijft.

RAINSHELL

Deze 100% PVC shell is de ideale oplossing voor plotselinge zeer heftige buien. De RainShell is volledig doorzichtig voor een goede zichtbaarheid, gecombineerd met pure waterdichte functionaliteit.

RESPUN

De ReSpun-collectie is Cannondale's bijdrage aan milieuvriendelijk produceren. Deze serie van weefsels is gemaakt van polyestervezels die zijn teruggewonnen uit PET-flessen of ander polyester restmateriaal. Het materiaal is ontworpen voor hoge prestaties en helpt om de hoeveelheid afval te verminderen. ReSpun is het perfecte materiaal voor milieuvriendelijke fietskleding.

• ReSpun 135: 100% Polyester Lichtgewicht stof met functionele stretch, uitstekende vochtafvoer en ademend vermogen.

• Carbon 150: 95% Polyester 5% samengestelde vezels Een ademende, waterafstotende en dub belgeweven stof met een functionele stretch, voorzien van absorberend carbon om vervelende luchtjes te voorkomen.

• ReSpun 170: 90% Polyester 10% Spandex Een iets dikker en steviger weefsel dat voorzien is van vochtmanagement en ontworpen met prestatiegerichte stretch.

• Carbon 270: 88% gerecycled polyester 12% Spandex Deze viervoudig elastische stof zorgt voor een lichte compressie en is voorzien van anti-geurbescherming.

URBANSHELL 3.0

210 gr/m² / 100% Polyester buitenzijde / binnenzijde van 100% Polyurethaan membraan

Een nieuwe innovatie op het gebied van softshell-technologie. De UrbanShell is voorzien van een netwerk-mesh binnenlaag met een vochtafvoer-rating van 15.000 mm H₂O. Het dual action-membraan voert transpiratievocht af naar de buitenste laag terwijl wind, regen en sneeuw worden tegengehouden. Een subtiel Schots ruitpatroon aan de buitenzijde voegt een extra stijlelement toe aan deze straatvechter.

XLE

130 gr/m² / 100% Polyester

Deze functionele dubbelgebreide stof heeft een netwerktextuur met een zeer duurzame buitenlaag en een viervoudig kanaalsysteem voor de koeling waardoor het vocht snel van de huid wordt afgevoerd zodat je droog blijft en de stof comfortabel aanvoelt. XLE is voorzien van functionele stretch en is ontworpen voor duurprestaties.

GIDSEN: CHAMOIS

X L.E.

WOMEN'S
X L.E.**X L.E. ZEEM**

De X.L.E. is absoluut Cannondale's beste zeem. De dual-density schuimlagen geven direct een comfortabel gevoel en blijven ook tijdens lange, zware ritten zacht aanvoelen. Strategisch geplaatste en geperforeerde luchtkanalen en open-celschuim zorgt voor een uitstekend ademend vermogen terwijl de Meryl Skinlife buitenlaag een boterzacht gevoel geeft.

- 8 mm dikke laag open-celschuim aan de voorzijde van de zeem zorgt voor ademend vermogen en geeft lichte ondersteuning
- 6 mm dikke laag met gesloten-celschuim ondersteunt het gewicht van de rijder en biedt langdurig comfort zonder randen of andere ongemakken
- Meryl Skinlife bovenlaag is boterzacht en biedt direct comfort
- Geperforeerde luchtkanalen door de structuur van de zeem biedt ongekend ademend vermogen
- Stikselvrije constructie elimineert schuurplekken op de naden
- Vierzijdig elastisch en specifiek ontwerp voor mannen en vrouwen garandeert een optimale pasvorm

SYNERGY

WOMEN'S
SYNERGY**SYNERGY**

De nieuwe Synergy-zeem van Cannondale is een perfect voorbeeld van trillingdempend comfort en buitengewone vochtregulerende eigenschappen. De basis van het dempingskussen is een 2 mm dikke laag die wordt gevolgd door een 4 mm en een 8 mm laag en ten slotte een 10 mm laag direct onder de zitbotjes van de rijder zodat het zitcomfort maximaal is. Aan de voorzijde van de zeem is een stikselvrije constructie gehanteerd (ter voorkoming van schuurplekken) en is voorzien van een perforatiesysteem om de ventilatie te optimaliseren. De bovenste laag van de zeem is gemaakt van Meryl Skinlife-weefsel voor een boterzacht comfortgevoel.

- Schuimdichtheid en lagen zijn zorgvuldig gekozen voor optimale ondersteuning en comfort tijdens lange ritten
- Stikselvrije constructie elimineert schuurplekken op de naden
- Meryl Skinlife bovenlaag is boterzacht en biedt direct comfort
- Perforaties optimaliseren het ademend vermogen
- Antibacterieel
- Sekse-specifieke kanalen in de structuur van de zeem verhogen de ventilatie en flexibiliteit

GIDSEN: AANVAL

**FITTED**

Voor fietsers die op het allerhoogste niveau presteren waarbij de strak gesneden pasvorm van de kleding net zo belangrijk is als de maat van de fiets. De kleding van ons profteam is nu ook voorzien van de Team Fit™-snit. De Team Fit™-snit is agressief getailleerd om als een tweede huid om je lijf te sluiten en biedt daarom de best mogelijke aerodynamische prestaties. Bij bepaalde kledingstukken is gebruikgemaakt van mesh inzetstukken voor maximale ventilatie en platgestikte naden om schuurplekken te voorkomen.

**SEMI FITTED**

Onze Competition Fit is gevormd naar het lichaam voor verbeterde aerodynamische prestaties. De Competition Fit is niet zo agressief gestroomlijnd als de Team Fit™ maar heeft nog steeds het strakke silhouet van de traditionele fietskleding.

**RELAXED FIT**

Elke rijder is verschillend en ook elke rit verschilt. Relaxed Fit is ontworpen om meer bewegingsvrijheid te hebben zonder dat de technische prestaties eronder lijden. Deze kledingserie heeft de meest wijde snit in onze kledinglijn maar is perfect voor iedereen – van serieuze racers die een meer ontspannen ogend kledingstuk willen aantrekken tijdens een training tot recreatieve rijders en singletrack-rippers.

EZ-FLEX

WOMEN'S
EZ-FLEX**EZ FLEX**

Cannondale's EX Flex-zeem biedt maximaal comfort aan de rijder. De zeem is gemaakt uit één stuk en heeft dus geen naden en randen waardoor de pedaalslag van de rijder niet wordt gehinderd door een slecht passende zeem. Verdere kenmerken van de EX Flex zijn de uitstekend ademende en vierzijdig elastische panelen.

- Constructie uit één stuk dus geen naden
- Lasnaden vormen extra ventilatiekanalen voor een betere luchtstroom en flexibiliteit dus hoger dagelijks comfort.
- Vierzijdig elastische panelen vormen zich langs het lichaam dus minder boorden en meer comfort
- Geborstelde synthetische stof koppelt stabiliteit aan comfort

CHART: COLORS/CODES

Please note color chart is for reference only and actual color may vary.

CODE	COLOR

DFT	Driftwood
ECL	Eclipse Blue
EMP	Emperor Red
GAT	Gray Anatomy
HVI	Hi Vis Yellow
PAB	Pacific Blue
SPH	Sapphire Blue
WHT	White
DBB	Plaid

⚠ WARNING

Bicycling has risks of serious injury or death that cannot be completely avoided. Risk can be minimized by: Reading and following all warnings and instructions in owner's manuals and owner's manual supplements. Always wearing a helmet. Practice and step-by-step learning. Ride in control and within your capabilities.

Riding at night, dusk or dawn is very hazardous, with risk of serious injury, paralysis or death. The risk of an accident, particularly being hit by a motor vehicle, is much higher at night. If you choose to accept this higher risk, improve your odds with a proper lighting system, strobe light, light colored reflective clothing and careful riding. Seek the advice of an experienced bicycle commuter at your retailer.

Some Cannondale clothing has reflective trim. Reflective trim may be helpful in making you more visible, but is certainly not adequate alone and not a substitute for required reflectors and lights. Cannondale strongly urges use of a flashing light or strobe. All of us at Cannondale who ride at night or in conditions of lower visibility use flashers. They can save your life.

CHART: APPAREL SIZING

While we measure hundreds of bodies to develop our Cannondale apparel sizes, no one cyclist is like another. The same holds true for performance fabrics. Every fabric plays a role in the experience and will stretch accordingly to provide both fit and range of motion. Therefore, our sizing chart should be used as a guide for reference. We're confident that it will put you in the range of a great fit.

MEN'S BODY APPAREL MEASUREMENTS

SIZE	XS	S	M	L	X	XX	XXX
Chest (in/cm)	34/86	36/91	38/96	40/101	43/109	46/117	49/124
Waist (in/cm)	29/73	31/79	33/84	35/89	38/97	41/104	44/112
Hip (in/cm)	34/86	36/91	38/97	40/101	43/109	46/117	49/124
